

Release Notes

7800VDPX & 7800VDOX

2.22e (16th October 2012)

Enhancements:

- Support for Jumbo frame.
- Add the T.38 Relay feature
- Add the answering machine and voice mail feature
- Add the gain control on PSTN/FXS1/FXS2. Adjusting this can resolve the bad PSTN quality (noise & echo) issues.

Note: TX direction is out and RX direction is IN.

So, PSTN TX -> 78V to remote site. FXS TX -> 78V to phone.

The gain value is effective with the next call.

- Add VPN PPTP client and server (7800VDOX) -- can set 4 sessions for Client and 4 sessions for Server.
- Support for Time Schedule control on QoS and DMZ.
- Answering Machine feature added.

See answering machine functionality:

*#00: Record users own greeting message;

- Start the recording after beep sound
- Press # when finished.
- Hang up after the beep is heard. (System need time to save to storage).

*#99: Delete the user's greeting message

*#98: Play the greeting message

*#xx: Access the specified answering machine, where xx is the prefix of individual answering machine, this can be found on the "SIP Account" page.

*#96: Enable the answering machine

*#97: Disable the answering machine

- After the beep sound, dial the specified code xx which xx can be found on the "SIP Account" page.
- Hang up after the beep is heard. (System needs time to save to storage).

Fixed:

- Fixed the TeamSpeak connection dropout issue.
- Fixed compatibility issue with Firefox 15.
- Fixed issue whereby VoIP feature may not work sometimes when user stops PSTN dialing whilst on-hook.
- Fixed issue whereby Usage bandwidth can't be displayed on IE9.
