

Release Notes

7800VDPX/VDOX

2.22b

10th September 2012

Enhancements

- 1) Changed PSTN failover prefix from # to *11#
- 2) Dialling *11# will give PSTN dial tone. However if you have # already in place then this won't be overwritten. You can either change this to *11# yourself or reset to factory.
- 3) Change VoIP dial tone so that users can better distinguish between VOIP & PSTN.
- 4) Time schedule control added to IP Filtering Outgoing/Incoming page
- 5) Changed the IP/Prefix Length setting on the IP Filtering Outgoing/Incoming page.
- 6) Support for NAT loopback added
- 7) Added "Registration Expire Timeout" field when user add a new SIP account via VOIP Quick Start.
- 8) Fixed issue whereby interface grouping didn't bind any WAN interfaces, LAN ports/WLAN can share the default WAN.
- 9) Allows larger than class C set on the LAN page.

Issues Fixed

- 1) Fixed Sub Menu Diagnostic issue
- 2) Fixed issue with VS + Remote Access
- 3) Fixed bug when editing SIP account on VOIP Quick Start page.
- 4) Fixed # issue with VoIP Dial Plan
- 5) Fixed issue with dhcp status page being slow
- 6) Improved PSTN audio quality
- 7) Resolved VoIP status page issue.

Known issues:

- 1) MAC - there are two options to resolve temporarily until a permanent fix is found:
 - Upgrade to latest OS
 - Disable IPV6 completely on wan & IPv6 autoconfig pages.
- 2) Teamspeak
- 3) Call Log issue
- 4) Echo/poor quality reception with PSTN
