

**Release Notes**  
**7800VDPX & 7800VDOX**  
**2.22**  
**3rd September 2012**

- 1) Fixed syslog overrun issue, resulting in some events not being logged
- 2) Fixed issue whereby PSTN call waiting/flash functions didn't work correctly in some situations.
- 3) Fixed issue whereby WEB returns to 2.4G page instead of WLAN 5G page after user applies WDS and MAC Filter settings
- 4) User can now dial to another FXS using \*\*771
- 5) Registrar information automatically entered for domain if field is empty.
- 6) Fix default setting for Pennytel (outbound proxy)
- 7) Removed the text " kernel: Linux version 2.6.30 (jennifer@localhost.localdomain)" and only show the system built time like "OS (09:30:07, Sep 3 2012)".
- 8) Fixed the wrong VoIP locale setting (should be Australia instead of Austria).
- 9) Fixed iiNet inbound call issue
- 10) Fixed # issue with the IPsec preshared key field.
- 11) Fixed issue whereby PSTN can't work whilst VoIP is stopped and user clicks in WEB GUI.
