

## Release Notes for 7800NV6 / 7800GZ

### **New Features:**

1. Add 1-1 NAT TR069 objects.
2. Add web access control page.
3. Add IPv6 QoS (7800NV6).
4. Add PPTP feature (7800NV6).
5. Allow dynamic IPv6 address with the packet filter, QoS page, web access control page, .. (:: at the beginning, the system will add the WAN prefix to it automatically) (7800NV6)
6. Add IPTV profile list selection (7800NV6 PCRange).

### **Improvements:**

1. Allow 3G usage larger than 4GB (7800GZ).
2. Change TR069 certification buffer size from 2048 to 4096.
3. Change the system's default DNS setting from TWN (168.95.1.1) to google (8.8.8.8 and 8.8.4.4)
4. Remove some log messages.

### **Bugs Fixed:**

1. Fixed issue whereby DHCP pool change causes fixed IP table error
2. Correct the ADSL SNR units on the TR069 and web page. TR069 will truncate the decimal part.
3. Fix the lifetime broadcast information with the RA packet (meet the real WAN's situation). (7800NV6)
4. Fixed issue whereby 3G usage Mail Alert might not send mail at the correct time (7800GZ)
5. Solve the problem that accessing the Virtual Server from LAN side might fails while the QoS rule is set.
