

Release Notes for 7800N and 7800GZ (1.06b)

- 1 Correct ADSL sync rate information with SNMP; the value is same as WEB page. Also, show 0 instead of the last sync up information while ADSL is down.
- 2 Support more TR069 objects (TR069 version)
- 3 Fix issue whereby dhcp server will stop if the "Fixed Host" name contains space character
- 4 Fix issue whereby too many P2P sessions might slow down normal traffic
- 5 Fix some IPsec issue (7800GZ)
- 6 Fix issue whereby the 3G usage page might not be correct while HTTP port is non-80 (7800GZ)
- 7 Add Static DNS
- 8 Add IPsec NAT Traversal (7800GZ)
- 9 Allow 0.0.0.0 as the remote part field on the IPsec page (7800GZ)
- 10 Fix issue whereby IPsec Domain Name on the IPsec can't reconnect
- 11 Fix inconsistent hostname value with SNMP and WEB page
- 12 Fix issue whereby 3G usage doesn't work correctly if user manually disconnects/connects the data call while the usage quota almost reaches the limit. (7800GZ)
- 13 Fix issue whereby WEB logout doesn't work under some circumstances.
